MobileNavigator 6

For Pocket LOOX N500 / T800 Series

Relaxed navigation

Issue April 2007

Pages 4

Image the situation:
You are arriving at the airport. An exhausting trip lies behind you. And the only thing you want is to drive to your hotel on the shortest way. But your rental car has neither a navigation system nor a confusing map in it.

No problem with the new MobileNavigator 6 software for your Pocket LOOX Series. Take over all addresses from your devices and start the navigation. Thanks to the excellent and high-contrast graphics you get navigated easily and relaxed. The full integrated GPS receiver determines the exact position and gives you verbal instructions and an exact 2D or 3D illustration on the display. MobileNavigator 6 also shows the signage in different traffic situations.

Enjoy the easiest use and exactest navigation wherever Europe leads you!

Easy to use

- New animated user interface with extremely good usability
- Lane Assistant and Signpost Information: shows the right lane and the real traffic sign direction (when available) to follow
- Route search, country search for hotels, restaurants, airports etc, Optional marking within the map
- Precise voice guide (choose from 19 languages) with notices regarding federal roads and motorways.
- Flexible tour-planning with as many intermediate destinations as you like and cross country navigation without the need for additional memory or map exchange.
- Exact positioning via full integrated GPS receiver, with automatic recalculation when you leave the planned route (re-routing)
- Comfortable and secure: handling directly by touching the screen or by using the arrow keys.
- Chose one of many self-defined destinations by voice input.
- Get access to all European maps (delivered on DVD) - no download of lots of megabyte needed

Always on the move

- Dynamic Route Overview
- MobileNavigator 6 fakes the GPS signal with constant speed until the tunnel is over
- Map display with realistic display of crossroads and arrow symbols, as well as further customizable features (for example optional 3D view, speed display, compass etc.)
- Outlook integration for quick navigation to any contact
- Optional speed information with acoustic warning at higher speed than allowed (not on all roads available)
- TMC (Traffic Message Channel) for saving time and avoiding traffic jams (optional TMC module is needed).

TMC - especially in Germany, Austria

TMC (Traffic Message Channel) is a special application of the FM Radio Data System (RDS). It continuously broadcasts encoded traffic and weather information in real-time, which are being received by the TMC receiver. The MobileNavigator|6 with connected TMC module compares this data to the current route in a matter of seconds and calculates an alternative route if necessary (time saving). The TMC application only receives traffic information regarding federal roads and motorways. On country roads and within a city you have the possibility of manually blocking street sectors. The blocked sectors will not be used for calculating the route.

Connector for an additional external GPS antenna
